Tinkering with the Raspberry Pi and other geeky stuff

Saturday, 16 November 2013

3D OpenGL visualisation of the data from an MPU-6050 connected to a Raspberry Pi

In this post I'll show how to serve the data over http and display a 3D representation in OpenGL extending on a [previous blog post](#) detailing how to read data from the MPU-6050 sensor and convert it into a something useful.

Using a simple web server to serve up the data

Let's start by setting up a simple server based on [web.py](#), which is installed via apt-get

```
sudo apt-get install python-webpy
```

Now create a directory to put the code in and create a simple test program

```
mkdir webpy
cd webpy
vi server.py
```

Use the following as a test

```
01 #!/usr/bin/python
02 import web
03
04 urls = (
05     '/', 'index'
06 )
07
08 class index:
09     def GET(self):
10         return "Hello, world!"
11
12 if __name__ == "__main__":
13     app = web.application(urls, globals())
14     app.run()
```

Save the and then set it as executable with

```
chmod +x server.py
```

and then run the code

```
./server.py
```

you will see something like this showing the server is waiting for a request (pressing Ctrl+C will stop the server)

```
http://0.0.0.0:8080/
```

Now point your browser at <http://ip-address-of-your-pi:8080> and it will show a web page with the content of **Hello, world!**. We can make use of this to read data from a remote machine, in my case my Linux desktop.

Adding the sensor code to the server

Replace the contents of server.py with

```
01 #!/usr/bin/python
02 import web
03 import smbus
04 import math
05
06 urls = (
07     '/', 'index'
08 )
09
10 # Power management registers
11 power_mgmt_1 = 0x6b
12 power_mgmt_2 = 0x6c
13
14 bus = smbus.SMBus(0) # or bus = smbus.SMBus(1) for Revision 2 boards
15 address = 0x68        # This is the address value read via the i2cdetect command
16
17 def read_byte(addr):
18     return bus.read_byte_data(addr, adr)
19
20 def read_word(addr):
21     high = bus.read_byte_data(addr, adr)
22     low = bus.read_byte_data(addr, adr+1)
23     val = (high << 8) + low
24     return val
25
26 def read_word_2c(addr):
27     val = read_word(addr)
28     if (val >= 0x8000):
29         val = val - 65536
```

58         accel_zout_scaled))
59
60 if __name__ == "__main__":
61     # Now wake the 6050 up as it starts in sleep mode
62     bus.write_byte_data(address, power_mgmt_1, 0)
63
64     app = web.application(urls, globals())
65     app.run()

```

The server has to be run as sudo so you have permissions to read from the I²C

```
sudo ./server.py
```

Connecting via your browser will now return the X & Y rotation values e.g.

```
-28.7291281627 -39.4833542336
```

3D visualisation

I'm using a Linux desktop and that is all I have tested this simple code on, I've no idea if it works on Windows or Macs and it certainly won't run on the Pi itself. I'm no OpenGL guru so this code is just hacked together to get something visible.

Setting up OpenGL and pygame

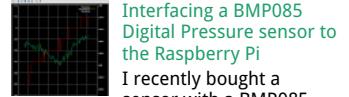

```
sudo apt-get install python-opengl
sudo apt-get install python-pygame
```

Now save the following to a file (in my case level.py) and run it

```

001 #!/usr/bin/python
002
003 import pygame
004 import urllib
005 from OpenGL.GL import *
006 from OpenGL.GLU import *
007 from math import radians
008 from pygame.locals import *
009
010 SCREEN_SIZE = (800, 600)
011 SCALAR = .5
012 SCALAR2 = 0.2
013
014 def resize(width, height):
015     glViewport(0, 0, width, height)
016     glMatrixMode(GL_PROJECTION)
017     glLoadIdentity()
018     gluPerspective(45.0, float(width) / height, 0.001, 10.0)
019     glMatrixMode(GL_MODELVIEW)
020     glLoadIdentity()
021     gluLookAt(0.0, 1.0, -5.0,
022               0.0, 0.0, 0.0,
023               0.0, 1.0, 0.0)
024
025 def init():
026     glEnable(GL_DEPTH_TEST)
027     glClearColor(0.0, 0.0, 0.0, 0.0)
028     glShadeModel(GL_SMOOTH)
029     glEnable(GL_BLEND)
030     glEnable(GL_POLYGON_SMOOTH)
031     glHint(GL_POLYGON_SMOOTH_HINT, GL_NICEST)
032     glEnable(GL_COLOR_MATERIAL)
033     glEnable(GL_LIGHTING)
034     glEnable(GL_LIGHT0)
035     glLightfv(GL_LIGHT0, GL_AMBIENT, (0.3, 0.3, 0.3, 1.0));
036
037 def read_values():
038     link = "http://192.168.1.65:8080" # Change this address to your settings

144         glColor(self.color)

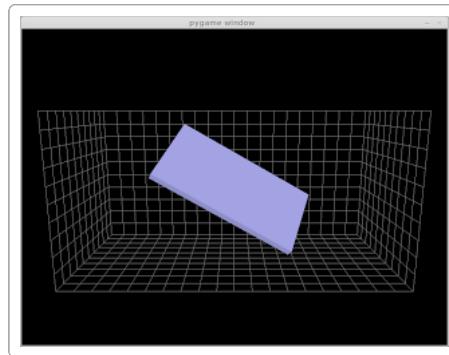

```

```

145     vertices = self.vertices
146
147
148     # Draw all 6 faces of the cube
149     glBegin(GL_QUADS)
150
151     for face_no in xrange(self.num_faces):
152         glNormal3dv(self.normals[face_no])
153         v1, v2, v3, v4 = self.vertex_indices[face_no]
154         glVertex(vertices[v1])
155         glVertex(vertices[v2])
156         glVertex(vertices[v3])
157         glVertex(vertices[v4])
158     glEnd()
159
160 if __name__ == "__main__":
161     run()

```

Remember to change the URL line 038 to your specific value (the address you used earlier to test the server). When you run it a window will open showing the orientation of the sensor, rotating the sensor will update the display.

You'll notice that when the sensor isn't being physically moved the noisy data is causing it to wobble. The [next blog post](#) shows how to reduce this.

I've just set this up on my pi, using PCLinux OS for the level.py code, but I get a blank pygame screen... I know nothing of pygame, so not sure what to look for... any guesses?

Do your Linux video driver support OpenGL as it will need this feature for the rendering.

John Wood 1 year ago
+Andrew Birkett possibly not! I'm not much of a linux GUI guy - more at home in the console! I'm

only using an old 32bit Dell at the moment, and PCLinux OS had the only support for my dual-monitor graphics card out of the box. I'll try to find better nVidia drivers and try again... Thanks!

Siddharth Gupta 1 year ago - Shared publicly

I can confirm this works on Mac. Thank you so much for the awesome tutorials!

alex b 5 months ago

so that means that we have to install the code on our laptop, not on Pi?

Andrew Birkett 5 months ago

Yes that's right.

Andy 2 years ago

I have corrected a bug in the render code and the server code so the orientations are calculated correctly.

Andy 2 years ago

Glad it worked ok. I'd be interested to see any changes / improvements you make to the code.

Alex Withthescar 2 years ago

Excellent Work! Up and running on OSX with only few changes! Thankyou!

Alex Withthescar 2 years ago

Once again, Thank you Andy! Counting the hours until the day job finishes so i can go play Pi! :)
